

Circular Letter nº 20150001: Placement of the wood in the trucks that load in the Center 1

Appreciated gentlemen,

Continuing one more year with the commitment to be excellent in the safety of the persons and collaborators, we send this circular letter where is described how placing the wood in the trucks that are going to load in Celsa 1.

In order to avoid the hand-trapping under the rolls to assure the load on the wooden peg, it will not be allowed load any truck if the driver does not use the useful one of accommodation of sticks or plugs of wood, where the rolls rest.

I take advantage of the moment to attach the specific procedures of how to place the wood in the truck according to the type of material that they take, wild roll, spooler or encarretado, it to be able to transmit to the drivers correctly. In addition, all this information is located in the scale, in the orders of load and in the parking scale.

The platforms of preparation and placement of the wood in the base of the truck, and the useful ones of accommodation of plugs, are distributed by the whole store (to see document of lay-out).

The use of the ladder and the useful one that facilitates the load of the rolls, are exemplary actions that help to avoid accidents to your drivers. For it, I request make them come this circular letter.

Thank you for guarding over his safety!!!
